

# 93%

of current and planned VDI/DaaS users have leveraged or will leverage third-party services to optimize these deployments.

Many organizations using or planning for VDI/DaaS find that they don't have the people or expertise to deploy and manage their infrastructure, resulting in additional expense for third-party services to help them operationalize their connected workforce solutions. Solutions that ease the deployment and management burden, while removing the manpower and competency bottlenecks, will be key for successful enterprise virtual desktop deployments.
