

Why NetApp VDS, you ask?

Because VDI has gone mainstream.
And you need to be ready.

Hybrid, Multi-cloud

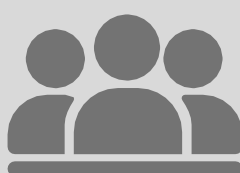

Any major cloud, anywhere in the world, anytime.

Oh, and on-prem, as well.

Try that with anyone else.

Integrated Deployment and Management

VDS doesn't only manage the virtual desktop layer. It handles what's under that, and on top of that.

- User/AD Layer
- Application Stack
- Windows virtual desktop
- Underlying Infrastructure

Somebody has to. If it's not VDS, then it would be you.

Enterprise-class infrastructure

Scalable, secure, performant infrastructure for the most demanding use-cases. For decades.

Cloud Volumes

Ultra scalable, high performance storage

Virtual Desktop Service

Automated provisioning, deployment, management, and optimization

SaaS Backup

Full M365 data protection

Global File Cache

Distributed Workspaces, consolidated storage

Cloud Compliance

Automated compliance

Cloud Insights

Infrastructure monitoring, insight
